

LightPoints FAQs

■ Schematic diagram

1. As the sheet of glass gets bigger does the LED increase in size?
No.
2. Can the LEDs be arranged in different patterns, e.g. can we recreate company Logos?
Yes, you can create logos, words, etc.
3. What is the maximum size of a sheet?
2500mm x 1300mm.
4. Can the LEDs be put close together to look like a line instead of a dot?
Close together yes, but you will always have "light points" no lines.
5. Is there a price list available?
Prices are available on request.
6. What is the life of the LEDs?
The lifetime depends on the application. The manufacturer of the LEDs says "approx 100,000 hours of life time".
7. Is there a maximum density for the LEDs?
We use only one type (version) of LEDs. They are for decorative application and not for lighting application.
8. Is the power supply visible?
The power supply to the LEDs is provided via virtually invisible conducting paths on the glass and the glass conductor plate is protected by a laminated cover glass.
9. What is the thickness of the glass?
2 x 4mm or 2 x 6mm. Any special thicknesses are on request basis.
10. What are the lead times?
Approx 12 to 14 weeks delivery after date of order.
